DataCeutics Meets a Major Milestone for a Leading Biotechnology Organization's Major Systems Upgrade.

Philadelphia, Pa - DataCeutics, Inc. met a major milestone in the SAS upgrade and migration project of a leading biotechnology firm. This milestone met the timeline and went well beyond the client's expectations. DataCeutics was able to provide a skilled team of SAS® Environment experts and application developers, as well as Clinical Reporting, and Compliance consultants. DataCeutics managed a large, multi-site upgrade that included over 500 man-years' of SAS data and programs. The upgrade impacted a large body of users in multiple locations, and included an extensive inventory of integrated programs and tools.

At the same time, the software platform underwent an extensive overhaul to incorporate new technologies. The rigors of the project were easily handled by a group of dedicated resources from DataCeutics. "Leading the project was made easier by having the resources we have, both from the offices of DataCeutics, and from the client" said Greg Weber, DataCeutics' Project Manager. "We have a depth of experience with SAS® migrations that few organizations can boast; it makes my job of meeting client's expectations and timelines much easier. It is no secret that DataCeutics has the most renowned industry resources in Paul Gilbert and Steve Light," he added.

As DataCeutics and its client look to completion of the next phase of the project, there is continued optimism from both organizations that the entire roll out, upgrade and migration of SAS v9.x data, programs and systems will be met with equal success.

DataCeutics, Inc.

The Leader in Human Research Information Technology

DataCeutics, Inc. is the leader in human research IT and compliance services. Our solutions include both software products and services.
