DataCeutics Leads the Way in Innovative SAS Application Development Services

Philadelphia, PA – DataCeutics continues to build upon its Clinical Application Development experience by harnessing the power and performance of SAS®. “SAS® is our tool of choice because it enables us to rapidly build and deploy customized and off the shelf application for Biostatistics and Clinical Data Management environments” noted Paul Gilbert, Principal Developer and President at DataCeutics.

Paul Gilbert leads a team of experienced SAS Application Developers and Clinical SAS Programmers whose combined experience has led to the successful completion of several clinical reporting applications within the past year alone. DataCeutics has been able to build applications for a global base of clients, with diverse requests for information from a variety of geographic locations and sources for clinical data. With SAS® as the primary application development tool, innovative, integrated applications are adeptly created and easily maintained for DataCeutics’ clients.

SAS® is also the tool of choice for DataCeutics’ own Clinical Reporting Solution®. This solution gives end users the convenience of on-demand clinical reports, built using SAS®, along with Java, Perl and HTML technologies. Combining these technologies minimizes some costs, and leverages a client’s technology investment in platforms, devices, etc.

DataCeutics’ applications incorporate SAS® components that are easily re-used. The SAS® applications DataCeutics develops also utilize automated code generation, so the speed with which client applications can be deployed is enhanced.

DataCeutics, Inc.

The Leader in Clinical Information Technology

DataCeutics, Inc. is the leading clinical technology organization focused on the life sciences industry. Our entire business focus is on providing clinical information technology services and products for the clinical research environment. DataCeutics has supported the pharmaceutical, biotechnology and CRO industries with high quality services and innovative software solutions for over 12 years. IT service solutions for the data management and clinical reporting systems range from system selection to implementation, validation and production support. DataCeutics’ leading reporting products are the CR Toolkit™, the Clinical Reporting Solution™, and DataCeutics Report Portal™.
